

Sample RAG Test Document

Introduction

This document is designed to test Retrieval-Augmented Generation (RAG) systems. It contains multiple topics so retrieval quality can be evaluated.

Artificial Intelligence

Artificial intelligence enables machines to perform tasks that normally require human intelligence. Machine learning and deep learning are subfields.

Databases

Vector databases store embeddings for semantic search. Common choices include FAISS, Chroma, Pinecone, and Milvus.

Networking

A VPN creates an encrypted tunnel between a client and a server. WireGuard is generally faster than OpenVPN.

Programming

Python is widely used for AI. Rust emphasizes memory safety and performance.

Conclusion

Example questions: What is a vector database? Which VPN protocol is faster? Which languages are mentioned?
